

VOS3000 2.1.9.07 – The Ultimate VoIP Operations Platform

Unleash unparalleled control and performance for your VoIP business.

Industry Leading

Setting the standard for VoIP management solutions.

Trusted Worldwide

Reliable performance, powering businesses across the globe.

Enterprise Grade

Robust and scalable for your most demanding operations.

Feature List: Power, Control & Scalability

VOS3000.Com — Your Trusted Partner in VoIP

VOS3000 is the industry-leading VoIP Operation & Billing System, trusted by telecom operators and resellers worldwide. Version 2.1.9.07 delivers unmatched stability, granular control, and enterprise-grade features.

Multi-Level Account & Agent Hierarchy

Build unlimited tiers of resellers and sub-accounts with independent balance and permissions.

Advanced Billing Engine

Real-time billing with support for complex rate plans (segmented, minute-based), packages, and profit calculation.

Comprehensive Gateway Management

Seamlessly manage dynamic/static SIP/H.323 gateways for both origination (Mapping) and termination (Routing) with intelligent failover.

Full Endpoint Control

Manage SIP/H.323 phones with features like call forwarding, do-not-disturb, call waiting, and custom dial plans.

Real-Time Analytics & Reporting

Monitor ASR, ACD, concurrent calls, and generate detailed financial and traffic reports (daily, weekly, monthly).

Enterprise-Grade Security

Dynamic blacklists, geo-fencing, IP whitelisting/blacklisting, and granular permission controls for users and data.

Deep Protocol Customization

Fine-tune SIP/H.323 timers, codecs (G.729, G.711, etc.), DTMF handling, NAT traversal, and media forwarding for maximum compatibility.

Intelligent Routing

Route calls based on cost, ASR, ACD, or custom priorities. Configure protection routes and quality-based sorting.

Flexible Package & Promotion System

Create time-based or one-time packages with rental fees, minimum spends, free minutes, and free credit.

Optimized for Asia: Low Latency Servers

Deploy Locally for Peak Performance

We offer dedicated VOS3000 servers physically located in key Asian regions to ensure the lowest possible latency for your call center (CC) traffic:

China

Ultra-low latency for seamless call handling and reduced packet loss across mainland operations.

Hong Kong

High-speed connectivity and maximum reliability for critical regional hubs.

Vietnam

Optimized data flow ensuring crystal-clear communication and enhanced voice quality.

Thailand

Consistent peak performance for call center traffic, eliminating lag and jitter.

Low Latency

Direct connections to eliminate lag and ensure rapid call processing.

Peak Performance

Optimized infrastructure for sustained high-volume call center traffic.

Crystal Clear Calls

Reduced packet loss and enhanced voice quality for superior customer experience.

Flexible Deployment: Rental or One-Time Purchase

Get Started Your Way

We provide the full-featured VOS3000 2.1.9.07 platform (including Codec Converter & Extra Modules) in two convenient models:

Rental

Start instantly with our cost-effective monthly plans. No large upfront investment required.

One-Time Installation

VOS3000 2.1.9.07 (or 2.1.8.05) for complete ownership. Can be Licensed in Multiple IP in same server even with mixed public and private ip license, So VOS3000 can send calls from local ip as well to locally.

We offer both models at the industry's most competitive prices.

API Information: Automate & Integrate

Full API Enabled — Build Your Custom Ecosystem

VOS3000 comes with a powerful, built-in RESTful API system for its web interface, allowing you to automate operations and integrate with your existing BSS/OSS.

API Capabilities Summary:

Account Lifecycle:

Create, modify, query, and delete customer accounts.

Endpoint Management:

Programmatically manage SIP/H.323 phones and gateways (Mapping & Routing).

Financial Operations:

Automate top-ups, retrieve billing history, and fetch real-time account balances.

Package & Subscription Control:

Create, modify, and manage service packages and subscription orders.

Rate & Tariff Management:

Query and manage fee rate groups and detailed pricing structures.

Real-Time Data:

Retrieve current calls, online endpoints, server performance metrics, and live CDRs.

Advanced Features:

Manage phone cards, IVR audio files, number transformation rules, and geo-fencing.

Note: Clients are responsible for developing their own front-end systems or middleware using this API. VOS3000 provides the robust backend interface for your custom solutions.
